Wild Horse Wind and Solar Facility in Ellensburg, WA

Aspiring to Beyond Net Zero Carbon by 2045

By 2045, we aspire to be a beyond net zero carbon energy company. We're pursuing three pathways to achieve this goal equitably and sustainably:

- Reduce emissions from our electric and gas operations and electric supply to net zero by 2030, and have a 100% carbon-free electric supply by 2045.
- Reach net zero carbon emissions from natural gas used in customer homes and businesses by 2045.
- Partner with customers and other sectors to reduce carbon emissions across our state.

We invite you to join us. Together, we can create a clean energy future for all.

Stay clear of overhead power lines

With summer weather comes home improvement projects that may bring ladders and tools close to overhead power lines. Be sure to look up and around you before you start any work. Keep all objects, including yourself, at least 10 feet from any overhead line. Accidental contact, even near contact, can cause an arc flash that can result in serious injury.

We're here to help

It's been a tough year, and Puget Sound Energy recognizes that for many families, the financial struggles associated with COVID-19 are not by any means over. If you are behind on your payments, you have options. These include payment assistance, extended payment plans for residential and small commercial accounts, and level payment plans, with the ability to choose your own due date. Depending on your income and size of your household, you may qualify for up to \$4,500 from one or all of our payment assistance programs: CACAP, PSE HELP and Federal LIHEAP.

Know the signs of a natural gas leak

You can usually detect natural gas from an odor of sulfur or rotten eggs, though it may smell differently to you. But there are other tell-tale signs, especially outdoors: bubbles escaping through a puddle, dead vegetation where you wouldn't expect it, and dirt blowing up from the ground. Natural gas is lighter than air and will rise, and can be ignited by a spark from flipping a light switch. If you detect gas, don't hesitate! Leave the area, then call PSE at **1-888-CALL-PSE**, or call **911**.
