

Community meetings on PSE route alternatives

Join us for a community meeting to:

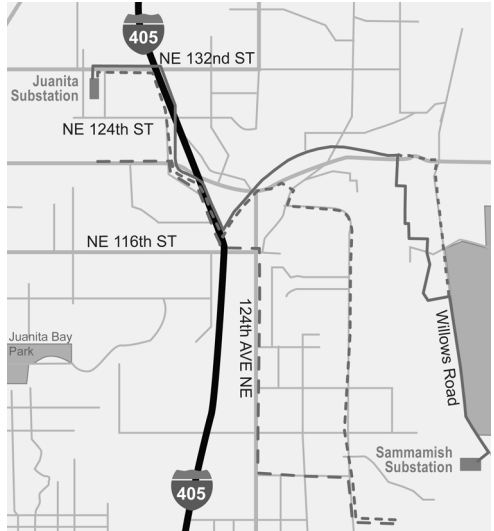

- Learn about the challenges facing the local electric system
- Discuss PSE's plans to address those challenges with a new 115 kV transmission line between our Sammamish and Juanita substations (see map)
- Learn how the advisory group is helping to site the new line
- Provide input on route alternatives for the new line
- Ask questions

Each meeting will include a presentation and facilitated question and answer session. The same information will be shared at each meeting.

Can't attend? Give us your feedback via the project webpage at PSE.com/SammJuan115.

We welcome your comments and questions on our project at info@sammjuan115.com.

Refreshments and information provided
